A\_1.2\_01

Das Klima des Landes kann trotz der Gebirgslage als mild bezeichnet werden. Es wird stark durch die Einwirkung des Föhns (warmer, trockener Fallwind in den Alpen) geprägt. Er verlängert die Vegetationszeit im Frühling und im Herbst. Die Messungen der jährlichen Niederschlagsmengen ergeben rund 900 bis 1'200 Millimeter. Im Alpengebiet ergeben die Messungen Niederschläge bis zu 1'900 Millimeter. Im Winter sinken die Thermometer selten unter minus 15 Grad, während im Sommer die mittleren Temperaturen zwischen 20 und 28 Grad schwanken.
